CHAPTER 1: WHY HABITS MATTER

[1.1] Small daily actions compound over time. A one percent improvement each day makes you thirty-seven times better after a year, while a one percent decline each day leaves you near zero. The point is not the single action but the system that repeats it.

[1.1] Most people fail because they chase goals instead of building systems. A goal sets a direction, but a system is the set of daily routines that actually moves you. Winners and losers often share the same goals, so the goal cannot be what separates them.

[1.1] Identity-based habits last longer than outcome-based habits. Instead of saying I want to read more, say I am a reader. Every page you read is then a vote for the type of person you wish to become.

[1.2] Small daily actions compound over time. A one percent improvement each day makes you thirty-seven times better after a year, while a one percent decline each day leaves you near zero. The point is not the single action but the system that repeats it.

[1.2] Most people fail because they chase goals instead of building systems. A goal sets a direction, but a system is the set of daily routines that actually moves you. Winners and losers often share the same goals, so the goal cannot be what separates them.

[1.2] Identity-based habits last longer than outcome-based habits. Instead of saying I want to read more, say I am a reader. Every page you read is then a vote for the type of person you wish to become.

[1.3] Small daily actions compound over time. A one percent improvement each day makes you thirty-seven times better after a year, while a one percent decline each day leaves you near zero. The point is not the single action but the system that repeats it.

[2.1] Small daily actions compound over time. A one percent improvement each day makes you thirty-seven times better after a year, while a one percent decline each day leaves you near zero. The point is not the single action but the system that repeats it.

[2.1] Most people fail because they chase goals instead of building systems. A goal sets a direction, but a system is the set of daily routines that actually moves you. Winners and losers often share the same goals, so the goal cannot be what separates them.

[2.1] Identity-based habits last longer than outcome-based habits. Instead of saying I want to read more, say I am a reader. Every page you read is then a vote for the type of person you wish to become.

[2.2] Small daily actions compound over time. A one percent improvement each day makes you thirty-seven times better after a year, while a one percent decline each day leaves you near zero. The point is not the single action but the system that repeats it.

[2.2] Most people fail because they chase goals instead of building systems. A goal sets a direction, but a system is the set of daily routines that actually moves you. Winners and losers often share the same goals, so the goal cannot be what separates them.

[2.2] Identity-based habits last longer than outcome-based habits. Instead of saying I want to read more, say I am a reader. Every page you read is then a vote for the type of person you wish to become.

[2.3] Small daily actions compound over time. A one percent improvement each day makes you thirty-seven times better after a year, while a one percent decline each day leaves you near zero. The point is not the single action but the system that repeats it.

[2.3] Most people fail because they chase goals instead of building systems. A goal sets a direction, but a system is the set of daily

[3.1] Small daily actions compound over time. A one percent improvement each day makes you thirty-seven times better after a year, while a one percent decline each day leaves you near zero. The point is not the single action but the system that repeats it.

[3.1] Most people fail because they chase goals instead of building systems. A goal sets a direction, but a system is the set of daily routines that actually moves you. Winners and losers often share the same goals, so the goal cannot be what separates them.

[3.1] Identity-based habits last longer than outcome-based habits. Instead of saying I want to read more, say I am a reader. Every page you read is then a vote for the type of person you wish to become.

[3.2] Small daily actions compound over time. A one percent improvement each day makes you thirty-seven times better after a year, while a one percent decline each day leaves you near zero. The point is not the single action but the system that repeats it.

[3.2] Most people fail because they chase goals instead of building systems. A goal sets a direction, but a system is the set of daily routines that actually moves you. Winners and losers often share the same goals, so the goal cannot be what separates them.

[3.2] Identity-based habits last longer than outcome-based habits. Instead of saying I want to read more, say I am a reader. Every page you read is then a vote for the type of person you wish to become.

[3.3] Small daily actions compound over time. A one percent improvement each day makes you thirty-seven times better after a year, while a one percent decline each day leaves you near zero. The point is not the single action but the system that repeats it.

[3.3] Most people fail because they chase goals instead of building systems. A goal sets a direction, but a system is the set of daily

[4.1] Small daily actions compound over time. A one percent improvement each day makes you thirty-seven times better after a year, while a one percent decline each day leaves you near zero. The point is not the single action but the system that repeats it.

[4.1] Most people fail because they chase goals instead of building systems. A goal sets a direction, but a system is the set of daily routines that actually moves you. Winners and losers often share the same goals, so the goal cannot be what separates them.

[4.1] Identity-based habits last longer than outcome-based habits. Instead of saying I want to read more, say I am a reader. Every page you read is then a vote for the type of person you wish to become.

[4.2] Small daily actions compound over time. A one percent improvement each day makes you thirty-seven times better after a year, while a one percent decline each day leaves you near zero. The point is not the single action but the system that repeats it.

[4.2] Most people fail because they chase goals instead of building systems. A goal sets a direction, but a system is the set of daily routines that actually moves you. Winners and losers often share the same goals, so the goal cannot be what separates them.

[4.2] Identity-based habits last longer than outcome-based habits. Instead of saying I want to read more, say I am a reader. Every page you read is then a vote for the type of person you wish to become.

[4.3] Small daily actions compound over time. A one percent improvement each day makes you thirty-seven times better after a year, while a one percent decline each day leaves you near zero. The point is not the single action but the system that repeats it.

[4.3] Most people fail because they chase goals instead of building systems. A goal sets a direction, but a system is the set of daily

CHAPTER 2: THE FOUR LAWS OF BEHAVIOUR

[1.1] Make it obvious. Habits start with a cue, so design your environment to show the cue clearly. Put the fruit bowl on the counter and the book on the pillow, and the right behaviour becomes the easy default.

[1.1] Make it attractive. We repeat what feels rewarding, so bundle a habit you need with one you want. Listen to your favourite podcast only while you exercise, and the workout starts to feel like a treat.

[1.1] Make it easy and make it satisfying. Reduce friction for good habits and increase it for bad ones. End every repetition with an immediate reward, because the brain remembers how an experience ended.

[1.2] Make it obvious. Habits start with a cue, so design your environment to show the cue clearly. Put the fruit bowl on the counter and the book on the pillow, and the right behaviour becomes the easy default.

[1.2] Make it attractive. We repeat what feels rewarding, so bundle a habit you need with one you want. Listen to your favourite podcast only while you exercise, and the workout starts to feel like a treat.

[1.2] Make it easy and make it satisfying. Reduce friction for good habits and increase it for bad ones. End every repetition with an immediate reward, because the brain remembers how an experience ended.

[1.3] Make it obvious. Habits start with a cue, so design your environment to show the cue clearly. Put the fruit bowl on the counter and the book on the pillow, and the right behaviour becomes the easy default.

[3.2] Make it attractive. We repeat what feels rewarding, so bundle a habit you need with one you want. Listen to your favourite podcast only while you exercise, and the workout starts to feel like a treat.

[3.2] Make it easy and make it satisfying. Reduce friction for good habits and increase it for bad ones. End every repetition with an immediate reward, because the brain remembers how an experience ended.

[3.3] Make it obvious. Habits start with a cue, so design your environment to show the cue clearly. Put the fruit bowl on the counter and the book on the pillow, and the right behaviour becomes the easy default.

[3.3] Make it attractive. We repeat what feels rewarding, so bundle a habit you need with one you want. Listen to your favourite podcast only while you exercise, and the workout starts to feel like a treat.

[4.1] Make it obvious. Habits start with a cue, so design your environment to show the cue clearly. Put the fruit bowl on the counter and the book on the pillow, and the right behaviour becomes the easy default.

[4.1] Make it attractive. We repeat what feels rewarding, so bundle a habit you need with one you want. Listen to your favourite podcast only while you exercise, and the workout starts to feel like a treat.

[4.1] Make it easy and make it satisfying. Reduce friction for good habits and increase it for bad ones. End every repetition with an immediate reward, because the brain remembers how an experience ended.

[4.2] Make it obvious. Habits start with a cue, so design your environment to show the cue clearly. Put the fruit bowl on the counter and the book on the pillow, and the right behaviour becomes the easy default.

[4.2] Make it attractive. We repeat what feels rewarding, so bundle a habit you need with one you want. Listen to your favourite podcast only while you exercise, and the workout starts to feel like a treat.

[4.2] Make it easy and make it satisfying. Reduce friction for good habits and increase it for bad ones. End every repetition with an immediate reward, because the brain remembers how an experience ended.

[4.3] Make it obvious. Habits start with a cue, so design your environment to show the cue clearly. Put the fruit bowl on the counter and the book on the pillow, and the right behaviour becomes the easy default.

[4.3] Make it attractive. We repeat what feels rewarding, so bundle a habit you need with one you want. Listen to your favourite podcast only while you exercise, and the workout starts to feel like a treat.

CHAPTER 3: BUILDING SYSTEMS THAT LAST

[1.1] Track your habits visually. A simple calendar with a cross for every completed day creates momentum, and the chain you do not want to break becomes its own motivation to continue.

[1.1] Never miss twice. Missing once is an accident, but missing twice is the start of a new habit. When life interrupts you, the goal is to get back on track immediately, even with a tiny version of the routine.

[1.1] Review and adjust every quarter. Ask what is working, what is not, and what you would change if you started today. Sustainable progress comes from patient iteration, not from heroic bursts of effort.

[1.2] Track your habits visually. A simple calendar with a cross for every completed day creates momentum, and the chain you do not want to break becomes its own motivation to continue.
